Reporting & BI: MIS Reporting, Dashboard Development, KPI Dashboards, Management Reporting, Performance Tracking, Data Visualization

Automation: Excel Automation, Google Sheets Automation, Google Apps Script, Workflow Automation, Report Automation, Email Automation

Tools: Excel, Power BI, SQL, Google Sheets, Google Apps Script, Python — Learning

PROFESSIONAL EXPERIENCE

AJIT ZONE PVT. LTD. — MIS / Business Operations & Process Automation

Surat, Gujarat | [Start Date] – Present

- Worked across business reporting, operational data management, dashboards, automation, and process improvement.
- Prepared and maintained structured MIS reports for business operations and analyzed department-wise performance, productivity, operational activity, and trends.
- Worked with large operational datasets and converted raw information into structured reports; performed data validation, cleaning, consolidation, and comparative analysis.
- Created KPI-based reports and dashboards for management review, including daily, weekly, monthly, and custom-period reporting views.
- Developed Excel and Google Sheets dashboards with KPI cards, trend analysis, department comparisons, and performance views.
- Automated repetitive business workflows using Excel, Google Sheets, and Google Apps Script.
- Designed automated payroll and payslip workflows including calculations, deductions, document generation, storage, and email distribution.
- Reduced payroll-related queries from approximately 20-30 per month to around 2-3 per month through improved process visibility and automation.
- Automated performance reporting workflows and reduced report preparation time from approximately 2-3 days to around 30 minutes.
- Analyzed existing business processes to identify repetitive work, bottlenecks, and reporting gaps; converted business requirements into structured workflows and system requirements.
- Coordinated with different departments to understand operational requirements and designed solutions combining business processes, data, reporting, and automation.

FEATURED SOFTWARE & ANALYTICS PROJECTS

1. LOAN APPLICATION & EMI MANAGEMENT SOFTWARE

Focus: Financial Workflow • Data Management • Automation • Reporting

- Mapped the complete loan lifecycle: Application → Approval → EMI Schedule → Deduction → Adjustment → Outstanding → Closure.
- Structured employee-wise loan records and designed loan application, approval, EMI schedule, repayment, deduction, adjustment, outstanding, and closure workflows.
- Defined reporting requirements for active loans, pending EMIs, outstanding amounts, recovery, and closures.
- Business impact: centralized loan information, reduced scattered manual records, and improved financial visibility.

2. GODOWN & INVENTORY MANAGEMENT SOFTWARE

Focus: Inventory • Warehouse Operations • QC • Dispatch • MIS

- Mapped warehouse workflow: Purchase → Inward → QC → Stock → Picking → Checking → Scanning → Packing → Parcel → Dispatch.

- Designed inward, outward, GR/return, QC, picking, packing, parcel, courier, and transport workflows with operational statuses and pending-work tracking.
- Defined exception tracking for mismatch, damage, shortage, and missing items, plus KPI requirements for inward, GR, QC, picking, packing, and dispatch.
- Structured inventory and transaction data for management reporting and connected purchase orders, credit notes, debit notes, and department workflows.
- Business impact: improved visibility into warehouse operations and enabled management to identify pending work and bottlenecks.

3. DAILY REPORT ANALYTICS SOFTWARE

Focus: Data Analytics • MIS • Dashboard Development • KPI Reporting

- Designed a dynamic reporting and analytics system connected with Google Sheets across multiple departments.
- Structured department and field-based reporting with KPI views, total entries, performance analysis, and Today vs Yesterday / weekly / monthly comparisons.
- Designed Online, Offline, and Floor Manager reporting views with totals, averages, min/max, counts, raw-value analysis, and department-level work trends.
- Defined reporting periods including Today, Yesterday, Weekly, Monthly, Yearly, and Custom date ranges, with export/reporting requirements.
- Business impact: centralized analytical visibility and reduced manual report analysis using real operational data.

4. CORAL BIOS FMS — FRANCHISE MANAGEMENT SOFTWARE

Focus: Business Analysis • CRM • Workflow Design • MIS • Operations

- Designed the franchise lifecycle: Lead → Interested → Plan Selected → Token Received → Survey → Approval → Agreement → Setup → Training → Purchase → Launch → Active.
- Structured lead management, assignments, calls, follow-ups, requirements, objections, lead-to-franchise conversion, and linked Lead ID / Franchise ID records.
- Designed centralized Franchise 360 view and workflows for purchase, GR/returns, payments, outstanding, complaints, training, interior, branding, marketing, influencer, and promotional activities.
- Defined document management/versioning, role-based access requirements, and dashboard KPIs for leads, conversion, token status, franchise growth, purchase, outstanding, returns, complaints, and pending activities.
- Business impact: connected separate franchise processes into one centralized system and improved visibility into the complete franchise journey and operational status.

ADDITIONAL AUTOMATION & ANALYTICS WORK

- Payroll & Payslip Automation: LOP/deduction calculations, payslip generation, Drive storage, and one-click email distribution.
- Performance Management Automation: Integrated daily work, attendance, penalty, and performance reporting; reduced report preparation from days to approximately 30 minutes.
- Attendance Analytics: Attendance, late arrivals, half-days, absences, working hours, and leave analysis.
- Task Productivity Tracker: Task assignment, completion, pending work, and employee/department productivity tracking; supported approximately 30% improvement in productivity.
- Training & Master Data Systems: Training calendar plus employee, attendance, leave, and advance master structures.
